SAFE-WEIGH

FORKLIFT HYDRAULIC SCALE SYSTEM

The SAFE-WEIGH series on-board weighing system is designed to give high accuracy at a budget price. This microprocessor based weight system is connected to the hydraulic lifting system on lift trucks or similar machines. A load can be placed on the forks and can be accurately weighed by measuring the hydraulic pressure. Designed for heavy industrial use, the lift truck can weigh a load in under 15 seconds. This will ensure your shipments will not exceed trailer capacity, waybills match actual weight, lift truck capacity is not exceeded, or material inventory matches actual weight. Once you use the SAFE-WEIGH, you will wonder how you managed without it. The SAFE-WEIGH is accurate to +/- 1% of the lift truck capacity.

Safe-Weigh Features:

- Stainless steel case and transducer
- Easy to read, user friendly
- External on/off switch
- Selectable capacity and division sizes
- Kg. or lb. unit is selectable
- Capacity up to 99,999 lbs.
- 1 Year Warranty
- 12-48V Operating Voltage

Safe-Weigh Functions:

- Tare Weight (Zero out container weight)
- Total Weight (totals the weight of many pallets)
- Over Weight Alarm if load exceeds lift truck capacity.

NOT LEGAL FOR TRADE
